

INDIAN INSTITUTE OF TECHNOLOGY
KANPUR

DEPARTMENT OF SUSTAINABLE
ENERGY ENGINEERING

PLACEMENT BROCHURE

2026–27

RECRUITER'S GUIDE

EDUCATION

- Solar PV
- Hydrogen
- Smart Grids
- Pumped Hydro
- Batteries
- CCUS
- Wind
- Energy Modelling

CAPABILITY

Experimental +
computational +
analytical + practical +
World Class knowledge

INDUSTRY FIT

- Energy
- Sustainability
- Policy Analytics
- Technology

ASHISH GARG

A warm welcome to the 2026 Placement Season from the Department of Sustainable Energy Engineering, IIT Kanpur. We look forward to connecting with the organisations seeking innovative, capable, and future-ready talent.

**MESSAGE FROM
HEAD OF
DEPARTMENT**

ENGINEERING THE NEXT ENERGY TRANSITION

A multi-disciplinary talent pool
trained across energy systems,
materials, modelling, policy
and clean technologies.

WHY SEE IIT KANPUR TALENT?

This graduating cohort is equipped to address techno-economic and complex sustainability challenges across the energy sector through rigorous academic training, hands-on laboratory experience, and research-driven learning. With strong theoretical foundations and practical expertise, our students bring advanced analytical, experimental, and computational skills to solving real-world energy and sustainability problems

01

MULTIDISCIPLINARY

Mechanical, Electrical, Civil, CSE, Chemical, Petroleum and AI & Data engineering backgrounds.

02

INDUSTRY-READY

Prior industry exposure supports roles in energy systems, sustainability, policy, analytics and technology development.

03

RESEARCH-DRIVEN

M.Tech thesis work spans renewable energy, storage, carbon management, hydrogen, power systems and sustainable built environments.

04

PROBLEM-SOLVING

Analytical thinking, domain expertise, modelling, experimentation and practical engineering skills.

PROGRAM & COHORT SNAPSHOT

PROGRAMS

- M.Tech
- M.S.(R)
- Ph.D.

M.TECH STRUCTURE

72 course + 72 thesis = 144 credits

INDUSTRY & LAB EXPOSURE

- EXPO visits
- Industrial Visits

ACADEMIC DIVERSITY

- Mechanical • Electrical • Civil • CSE
- Data Science • Chemical • Petroleum

STUDENT RESEARCH DOMAINS

RESEARCH, LABS & CURRICULUM

Solar PV & advanced PV

Battery energy storage

Green hydrogen materials

Energy harvesting & IoT sensors

Recycling / waste management

Smart materials & devices

CCUS

Thermal Energy

Membranes & separation

Smart grids, renewable integration

Energy policy & LCA

Net-zero buildings

Wind energy

Electric Vehicles

Solar PV Lab

- PV materials • perovskite/organic/tandem • storage • recycling

TheSLa

- Battery thermal management • heat transfer • solar thermal • thermo-chemical

NOVEL / CREATE

- Hybrid AC/DC microgrids • EVs • fuel cells • renewable integration

Energy Materials Group

- Solid-State, Li-ion Batteries • thin films • BIPV • advanced characterization

ElectroDES

- Electrodes • electrolyzers • Fabrication • Simulation • membranes

MetLab

- Materials • Circularity • CCUS • Power-to-X • Integrated devices

Aerosol

- Air-quality source apportionment • PM2.5

Wind / Policy

- Forecasting • Development of wind turbines • ESG • LCA • NetZero Energy

CURRICULUM — RECRUITER VIEW

Core Engineering

- Thermo-Fluid Engineering • Thermodynamics of Energy Systems • Electrical Power Engineering • Mathematical & Computational Tools

Energy Systems & Storage

- Physics of Energy Materials • Electrochemical Energy Systems • Hydrogen Energy • Fuel Cells • Energy Systems Modelling & Analysis

Renewables & Electrification

- Solar PV • Wind Energy • Solar Thermal Engineering • Renewable Energy Integration & Smart Power Systems • Electric Mobility • Power Electronics for EVs • Critical Materials for Clean Energy Transition

Sustainable Technologies

- Bioenergy & Biofuels • A Net-Zero Energy Buildings • CCUS • Catalysis for Clean Energy • Recycling Energy Materials

Advanced Tools & Transition

- Materials Modelling & Simulation • Finite Volume Methods • Techno-Economic Assessment for Low-Carbon Transition

STUDENT PROFILES

Devansh

AI/ML application in carbon Capture, Utilisation and Storage (CCUS), Data analysis

Bhairavi Sanjay

Sustainability in Climate with AI, ML and Stats.

Jayesh Maurya

Carbon Capture, Utilisation and Storage (CCUS)

Bhavesh Inani

Solar PV, Data Analysis & ML, ESG & LCA

Rachit Sahu

Policy, and Economics of critical minerals

Esha Singh

Solar PV, AI/ML, Energy Efficiency & Analytics, Sustainable Energy Systems

Divyanshu Prakash

Solar Thermal System and Hydrogen Production

Harsha Kumar

Battery Technology & Electrochemical Energy Storage

Prajapati Ankit

Life Cycle assessment, Lithium Ion Batteries

Vivek Khandebharad

Battery Tech and Electrochemical energy storage

Arhan Mukherjee

Solar PV, fabrication of thin film perovskite solar cells

Shantanu Bhardwaj

Building Energy Efficiency

Shanmukha Naidu

Behavioral Energy Economics and Policy

Abhishek Solanki

Wind Turbines and Optimization

Rupesh Mishra

Sorting of E-waste using AI/ ML

Somdatt Kumar

Solar PV, Thermochemical Water Splitting & Green Hydrogen, Energy Systems Modelling

VINOTH KUMAR S

Energy Conversion Devices

Balavinayagam K

Solar Thermal

PROMINENT RECRUITERS

WHY ENGAGE WITH SEE IIT KANPUR?

- Talent trained at the intersection of engineering, energy, materials, computation and policy.
- Hands-on exposure to batteries, solar PV, hydrogen, CCUS, Wind technology and sustainability.
- Research-led problem solving with experimental, modelling, ESG and analytical capabilities.
- A multidisciplinary cohort suitable for energy, consulting, sustainability, analytics, R&D and technology roles.
